

Data Analytics

Introduction to Data

In today's discussion...

- Introduction to data
- Current trend
- Data and Big data
- Big data vs. small data
- Tools and techniques

Introduction to data

- Example:

10, 25, ..., Kharagpur, 10CS3002, namo@gov.in

Anything else?

- Data vs. **Information**

100.0, 0.0, 250.0, 150.0, 220.0, 300.0, 110.0

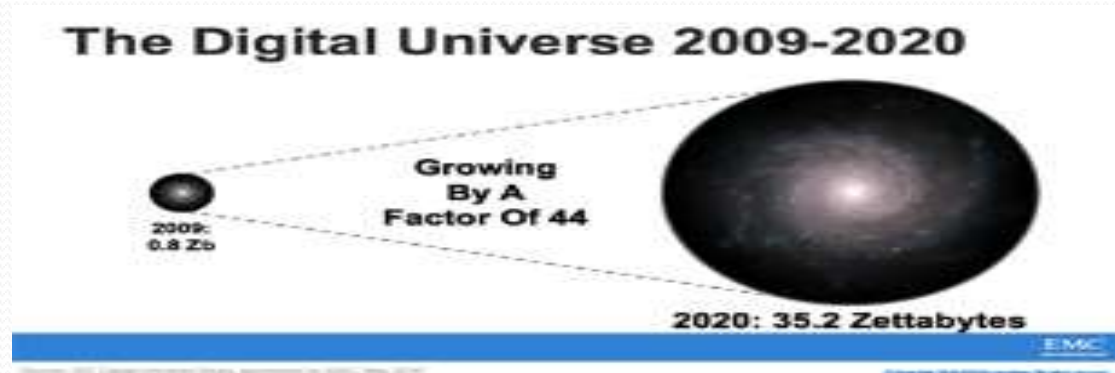

Is there any information?

How large your data is?

- What is the maximum file size you have dealt so far?
 - Movies/files/streaming video that you have used?
- What is the maximum download speed you get?
 - To retrieve data stored in distant locations?
- How fast your computation is?
 - How much time to just transfer from you, process and get result?

Memory unit	Size	Binary size
kilobyte (kB/KB)	10^3	2^{10}
megabyte (MB)	10^6	2^{20}
gigabyte (GB)	10^9	2^{30}
terabyte (TB)	10^{12}	2^{40}
petabyte (PB)	10^{15}	2^{50}
exabyte (EB)	10^{18}	2^{60}
zettabyte (ZB)	10^{21}	2^{70}
yottabyte (YB)	10^{24}	2^{80}

Growth of data

Sources of data

- “Every day, we create 2.5 quintillion bytes of data
 - So much that 90% of the data in the world today has been created in the last two years alone.
 - The data come from several sources
 - sensors used to gather climate information
 - posts to social media sites,
 - digital pictures and videos
 - purchase transaction records
 - cell phone GPS signals

etc.

..... to name a few!

Examples

Social media and networks
(All of us are generating data)

Scientific instruments
(Collecting all sorts of data)

Mobile devices
(Tracking all objects all the time)

Sensor technology and networks
(Measuring all kinds of data)

Now data is Big data!

- No single standard definition!
- ‘Big-data’ is similar to ‘Small-data’, but bigger
 - ...but having data bigger consequently requires different approaches
 - techniques, tools and architectures
 - ...to solve: new problems
 - ...and, of course, in a better way

Big data is data whose scale, diversity, and complexity require new architecture, techniques, algorithms, and **analytics** to manage it and extract value and **hidden knowledge** from it...

Characteristics of Big data: V3

V3 : V for Volume

- Volume of data, which needs to be processed is increasing rapidly
 - More storage capacity
 - More computation
 - More tools and techniques

Exponential increase in collected/generated data

V3: V for Variety

- Various formats, types, and structures
 - Text, numerical, images, audio, video, sequences, time series, social media data, multi-dimensional arrays, etc...
- Static data vs. streaming data
- A single application can be generating/collecting many types of data

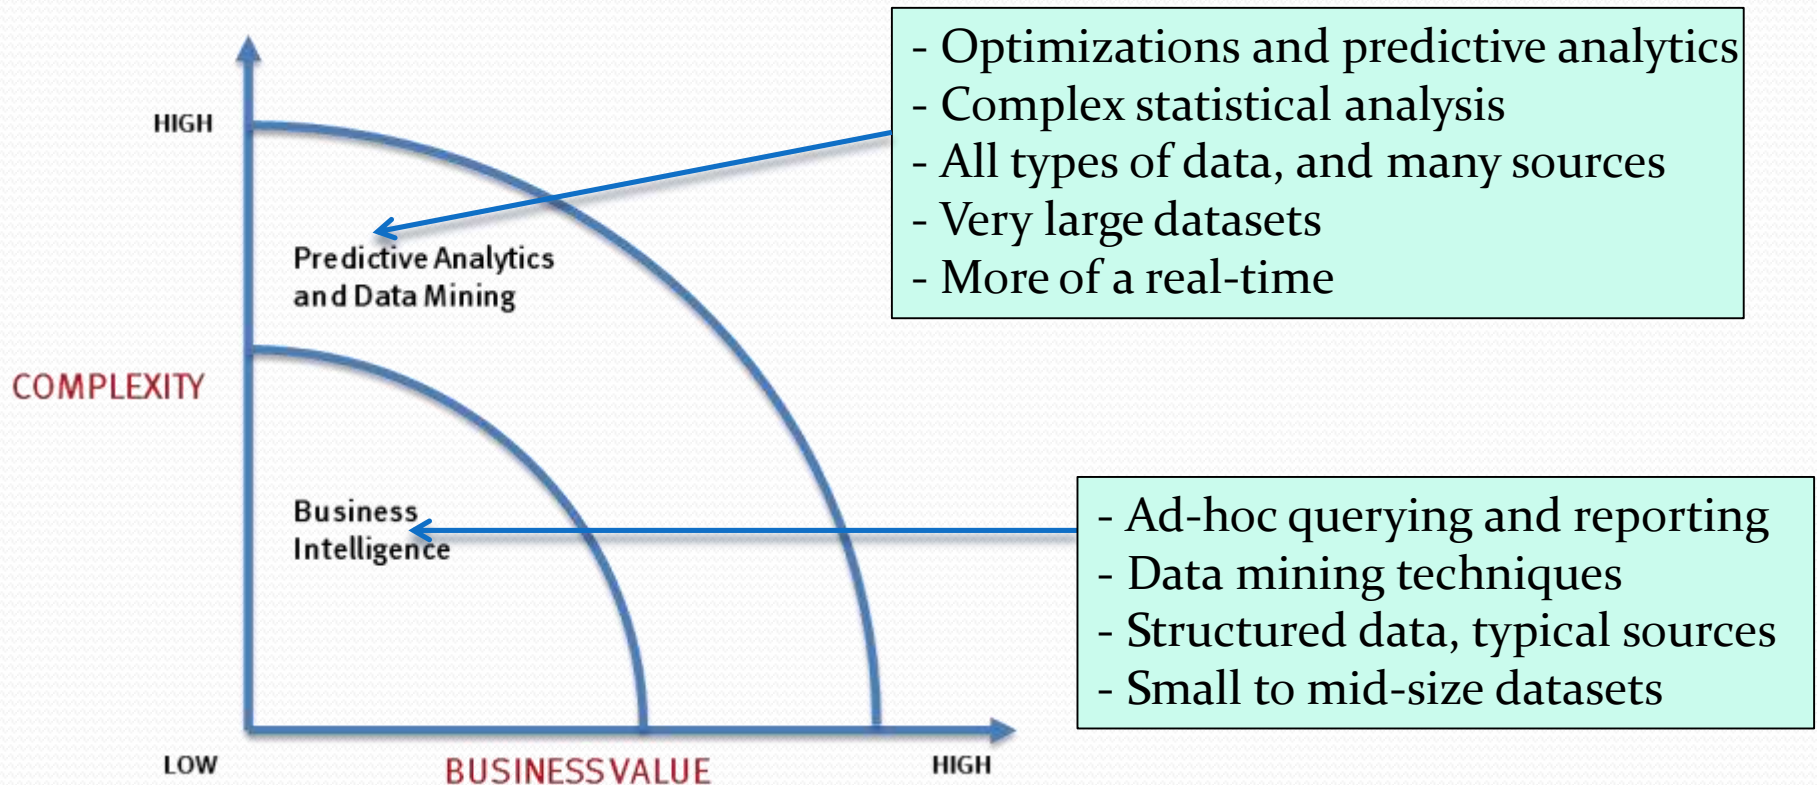

To extract knowledge → all these types of data need to be linked together

V3: V for Velocity

- Data is being generated fast and need to be processed fast
 - For time-sensitive processes such as catching fraud, big data must be used as it streams into your enterprise in order to maximize its value
 - Scrutinize 5 million trade events created each day to identify potential fraud
 - Analyze 500 million daily call detail records in real-time to predict customer churn faster
- Sometimes, 2 minutes is too late!
 - The latest we have heard is 10 ns (nano seconds) delay is too much

Big data vs. small data

Big data vs. small data

- Big data is more **real-time in nature** than traditional applications
- Big data architecture
 - Traditional architectures are not well-suited for big data applications (e.g. Exa-data, Tera-data)
 - Massively parallel processing, scale out architectures are well-suited for big data applications

Challenges ahead...

- **The Bottleneck is in technology**
 - New architecture, algorithms, techniques are needed
- **Also in technical skills**
 - Experts in using the new technology and dealing with Big data

Who are the major players in the world of Big data?

Big Data Landscape

Vertical Apps

Ad/Media Apps

Business Intelligence

Analytics and Visualization

Log Data Apps

Data As A Service

Analytics Infrastructure

Operational Infrastructure

Infrastructure As A Service

Structured Databases

Technologies

Major players...

- Google
- Hadoop
- MapReduce
- Mahout
- Apache Hbase
- Cassandra

Tools available

- **NoSQL**
 - Databases MongoDB, CouchDB, Cassandra, Redis, BigTable, Hbase, Hypertable, Voldemort, Riak, ZooKeeper
- **MapReduce**
 - Hadoop, Hive, Pig, Cascading, Cascalog, mrjob, Caffeine, S4, MapR, Acunu, Flume, Kafka, Azkaban, Oozie, Greenplum
- **Storage**
 - S3, HDFS, GDFS
- **Servers**
 - EC2, Google App Engine, Elastic, Beanstalk, Heroku
- **Processing**
 - R, Yahoo! Pipes, Mechanical Turk, Solr/Lucene, ElasticSearch, Datameer, BigSheets, Tinkerpop

Questions about the theme ...

1. What is the smallest and largest units of measuring size of data?
2. How big a Quintillion measure is?
3. Give the examples of a smallest the largest entities of data.
4. Give FIVE parameters with which data can be categorized as i) simple, ii) Moderately complex and iii) complex?

Questions about the theme...

5. What type of data are involved in the following applications?
 1. Weather forecasting
 2. Mobile usage of all customers of a service provider
 3. Anomaly (e.g. fraud) detection in a bank organization
 4. Person categorization, that is, identifying a human
 5. Air traffic control in an airport
 6. Streaming data from all flying aircrafts of Boeing
